ABSTRACT OF THE DISCLOSURE

A wafer bonding method of forming silicon-on-insulator comprising integrated circuitry includes nitridizing at least a portion of an outer surface of silicon of a device wafer. After the nitridizing, the device wafer is joined with a handle wafer. A method of forming silicon-on-insulator comprising integrated circuitry includes nitridizing an interface of the silicon comprising layer of silicon-on-insulator circuitry with the insulator layer of the silicon-on-insulator circuitry. After the nitridizing, a field effect transistor gate is formed operably proximate the silicon comprising layer. Other methods are disclosed. Integrated circuitry is contemplated regardless of the method of fabrication.
